

Data Architecture

Automated Network Request Management

Date	26 September 2026
Team ID	
Project Name	Automated Network Request Management
Maximum Marks	4 Marks

Scope

This document covers only the creation of the database table and the creation of its fields for the Automated Network Request Management project. Flow Designer and workflow implementation are not included in this document.

Activity 1: Creation of Table

Table Creation

Step	Action	Details
1	Navigate to	System Definition → Tables.
2	Create table	Click New to create a new table.
3	Table Label	Enter: Database Tables
4	Table Name	Enter: <u>u_database_table</u>
5	Submit	Click Submit to create the table.

Tables Updated Search					Actions on selected rows... New
All > Update name is not empty					
☐	Label	Name	Extends table	Extensible	Updated
☒	Database Table	u_database_table	(empty)	false	2026-09-22 23:49:41
	Build Agent Conversation	sn_build_agent_conversation	(empty)	false	2026-09-22 09:36:48

Figure 1: ServiceNow Table Creation / Table Definition

Activity 2: Creation of Fields

Create and arrange the required fields in the Database Tables table using the ServiceNow table and form configuration options.

1. Navigate to All → System Definition → Tables.
2. Search for Database Tables in the table list.
3. Open the Database Tables table.
4. Click Show Form.
5. Select Form Design.
6. Arrange the fields in the required order using Form Design.
7. In the Columns section of the Network Database table, configure the Auto Number field.
8. Provide the required Prefix and Number format for the Auto Number field.
9. Click Save to save the table and form changes.
10. Verify the newly created fields by opening a Network Database record.

Fields to Create

Field Name	Field Type	Reference
Database Number	String	—
Assignment to	Reference	user
Mobile Number	String	—
Total Amount	String	—
Mode of Payment	String	—
Type of Connection	String	—
Customer Address	String	—
Approval Status	String	—
Requested For	String	—

The screenshot displays the ServiceNow Form Design / Field Configuration interface. At the top, the 'Table' configuration section shows the table name 'Database Table' and the application 'Global'. Below this, the 'Columns' tab is active, showing a list of columns for the 'Database Table'. The columns are configured with labels, types, references, max lengths, default values, and display settings. The columns listed are: Sys ID (GUID), Database Number, Assigned to, Mobile Number, Total Amount, Approval Status, Address, Mode of Payment, Requested For, Type of Connection, Created by, Created, Updated by, Updates, and Updated. The 'Database Number' column is highlighted with a red 'X' icon, indicating it is the current selection. The 'Created' column is highlighted with a blue 'X' icon, indicating it is the current selection. The 'Updates' column is highlighted with a blue 'X' icon, indicating it is the current selection. The 'Updated' column is highlighted with a blue 'X' icon, indicating it is the current selection.

Column label	Type	Reference	Max length	Default value	Display
Sys ID	Sys ID (GUID)	(empty)	32		false
Database Number	String	(empty)	40	javascript:global.getNextObj(NumberPadded);	false
Assigned to	Reference	User	32		false
Mobile Number	String	(empty)	40		false
Total Amount	String	(empty)	40		false
Approval Status	String	(empty)	40		false
Address	String	(empty)	40		false
Mode of Payment	String	(empty)	40		false
Requested For	String	(empty)	40		false
Type of Connection	String	(empty)	40		false
Created by	String	(empty)	40		false
Created	Date/Time	(empty)	40		false
Updated by	String	(empty)	40		false
Updates	Integer	(empty)	40		false
Updated	Date/Time	(empty)	40		false

Figure 2: ServiceNow Form Design / Field Configuration

Verification

After saving the table and fields, open a Network Database record and verify that the configured fields are displayed correctly and that the Auto Number configuration produces the expected record number format.
